A rotork® Brand

rotork®

Keeping the World Flowing

**RELIABILITY
IN FLOW CONTROL
CRITICAL
APPLICATIONS**

› **Reliable operation** when it matters

Assured reliability for critical applications and environments. Whether used 24/7 or infrequently, Rotork products will operate reliably and efficiently when called upon.

› **Customer-focused service** worldwide support

Solving customer challenges and developing new solutions. From initial enquiry through to product installation, long-term after-sales care and Client Support Programmes (CSP).

› **Quality-driven** global manufacturing

Products designed with 60 years of industry and application knowledge.

Research and development across all our facilities ensures cutting edge products are available for every application.

› **Low cost** of ownership

Long-term reliability prolongs service life.

Rotork helps to reduce long term cost of ownership and provides greater efficiency to process and plant.

Comprehensive product range serving multiple industries

Improved efficiency, assured safety and environmental protection.

Rotork products and services are used throughout industry inclusive of Power, Oil & Gas, Water & Wastewater, HVAC, Marine, Mining, Pulp & Paper, Food & Beverage, Pharmaceutical and Chemical industries around the world.

Global presence local service

Global company with local support.

Manufacturing sites, service centres, sales offices and *Centres of Excellence* throughout the world provide unrivalled customer services and fast delivery.

Market leader technical innovator

The recognised market leader for 60 years.

Our customers have relied upon Rotork for innovative solutions to safely manage the flow of liquids, gases and powders.

Corporate social responsibility

A responsible business leads to being the best business.

We are socially, ethically, environmentally responsible and committed to embedding CSR across all our processes and ways of working.

rotork®

Rotork are specialist manufacturers of products for flow control, pressure control, flow measurement and pressure measurement. Our solutions are trusted wherever there is a need for high precision and reliability, including oil and gas, pharmaceutical, biomedical and manufacturing industries.

We have production facilities throughout the world, complemented by a large network of distribution and support centres.

A full listing of our worldwide sales and service network is available on our website at www.rotork.com

Worldwide Industry and Application Experience

With over 60 years of extensive knowledge and experience, Rotork has provided products and services worldwide for virtually every industrial actuator application.

Rotork offers a range of precision control and valve accessory products through our prestigious brands, including Fairchild, YTC, Soldo®, Midland-ACS™, Bifold®, Orange, M&M and Alcon:

Instrument Valves

- Valve actuation accessories
- Solenoid valves
- Piston valves
- Instrument valves
- Medium pressure valves
- Subsea valves and connectors

Controllers

- Valve positioners
- Rail systems
- I/P and E/P converters
- Fire protection

Measurement

- Valve position sensors
- Transmitters and switches

Instrument Pumps

- Pumps
- Intensifiers and accumulators

Rotork is proud to offer a diverse range of products which serve many different duties in a wide variety of applications. We also offer a factory customisation service to create one-off units to meet specific needs.

Rotork Italy are leading manufacturers of industrial solenoid valves, made under the M&M brand. Whether designing solutions for stand-alone valves or a customised OEM installation we have developed an enviable reputation for quality products, reliability and innovation.

With facilities based in Italy and sales offices worldwide, we can provide solenoid valves to operate a wide variety of applications anywhere in the world.

Our product line covers a full range of valves for general and special-purpose including:

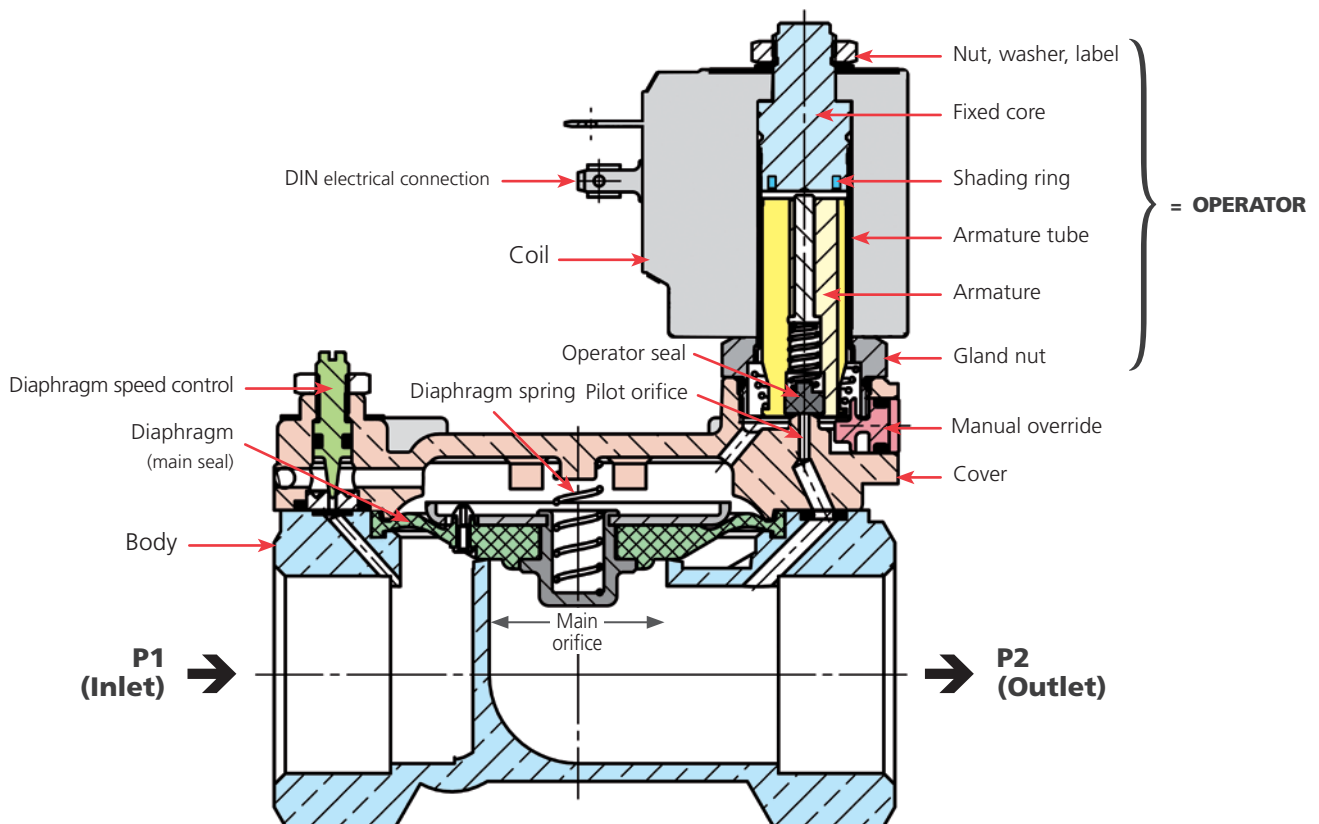

- Air
- Water
- Steam
- Automation
- Actuation
- High Pressure
- Aggressive Media
- Vacuum

Our solenoid valves can be manufactured with coils and enclosures covered by UL to meet application demands.

The advantages of solenoid valves manufactured under the M&M brand include:

- Robust construction for industrial applications featuring stainless steel orifice on most models
- Stainless steel operators with low residual magnetism according to 1.4105 EN 10088 (AISI 430F)
- High quality seal materials
NBR, FKM, EPDM, PTFE, Sigodur (filled PTFE), Ruby, Kalrez®
- Fully interchangeable coils* with a wide range of AC and DC voltages. Coil orientation possible through 360°
- Coils tested 100% in compliance with the current EC directives compliance to RoHS directive and to relevant international standards upon request
- Development and realisation of special projects

*where applicable

D298/299 - RUBY seal, NC -

Media¹: water, oil, air and aggressive fluids
 Media temperature: -10 to +130 °C
 Ambient temperature: -10 to +50 °C
 Seal material: Ruby
 Coil power: AC 25 VA (holding)
 AC 50 VA (inrush)
 DC 22 W

Notes

Seamless tube as standard
¹ Not 100% leak-proof when used with air/gases.
 Approximate leak rate is 1,5 ml/min at max. OPD.

ATTENTION: When high pressure valves are supplied without a coil, their nameplates display the max. OPD of the valve when equipped with an AC (25 VA) and DC (22 W) coil (as shown in the table above). **When using alternative coil power ratings please ensure to request separately the appropriate nameplate at time of order.**

2/2 way direct acting solenoid valve, G 1/8" – G 1/4"

Common features

Body material: stainless steel (1.4305 EN 10088/AISI 303)
 Orifice material: stainless steel (1.4305 EN 10088/AISI 303)
 Operator material: stainless steel
 Protection class: IP 65 (with connector and gasket)

Options

Available with body thread connection 1/8" (e.g. code RD298DVA), performance ratings remain the same as RD299DVA
 Silver shading ring (e.g. code RD299DVCA)
 NPT connection on request, minimum batch may be required (e.g. code RD298DVG N)

Notes

Normally open version not available for orifice > Ø 3 mm
 Protective treatment of operators is recommended, minimum batch may be required

B297 - FKM seal, NC -

Coil power: AC 10 VA (holding)
 AC 16 VA (inrush)
 DC 7 W

Options

Manual override (e.g. code B297DVCM)
 Electroless nickel plating treatment (e.g. code B297DVEK)

RB297 - FKM seal, NO -

Coil power: AC 10 VA (holding)
 AC 16 VA (inrush)
 DC 7 W

2/2 way direct acting solenoid valve, G 1/8" – G 1/4"

Common features

Body material: brass (CW617N EN 12165)
 Orifice material: stainless steel (1.4305 EN 10088/AISI 303)
 Operator material: stainless steel
 Protection class: IP 65 (with connector and gasket)

Options

Available with body thread connection 1/8" (e.g. code D262DVH), performance ratings remain the same as D263DVH.
 Manual override (e.g. code D262DVCM).

TYPE: D262/263

D262/263 - RUBY seal, NC -

Media: water, oil, liquids
 Media temperature: -10 to +130 °C
 Ambient temperature: -10 to +50 °C
 Seal material: Ruby
 Coil power: AC 25 VA (holding)
 AC 50 VA (inrush)
 DC 22 W

Notes

Seamless tube as standard

² Not 100% leak-proof when used with air/gases.
 Approximate leak rate is 1,5 ml/min at max. OPD.

ATTENTION: When high pressure valves are supplied without a coil, their nameplates display the max. OPD of the valve when equipped with an AC (25 VA) and DC (22 W) coil (as shown in the table above). **When using alternative coil power ratings please ensure to request separately the appropriate nameplate at time of order.**

2/2 way direct acting solenoid valve, G 1/8" – G 1/4"

Common features

Body material: brass (CW617N EN 12165)
 Orifice material: stainless steel (1.4305 EN 10088/AISI 303)
 Operator material: stainless steel
 Protection class: IP 65 (with connector and gasket)

Options

Available with body thread connection 1/8" (e.g. code RD262DVA), performance ratings remain the same as RD263DVA.
 For steam version with filled PTFE seal (Sigodur) see valve model **RD236DL-** on page 21
 For high pressure version with Ruby seal see valve model **RD236DR-1** on page 21

RD236 - RUBY seal, NO -

Media¹: water, oil, liquids
 Media temperature: -10 to +130 °C
 Ambient temperature: -10 to +50 °C
 Seal material: Ruby
 Coil power: AC 25 VA (holding)
 AC 50 VA (inrush)
 DC 22 W

Notes

Seamless tube as standard

¹ Not 100% leak-proof when used with air/gases.
 Approximate leak rate is 1,5 ml/min at max. OPD.

3/2 way direct acting solenoid valve, G 1/8"

Common features

Media: water, oil, air and aggressive fluids
 Media temperature: -10 to +130 °C
 Ambient temperature: -10 to +50 °C
 Body material: stainless steel (1.4305 EN 10088/AISI 303)
 Orifice material: stainless steel (1.4305 EN 10088/AISI 303)
 Operator material: stainless steel
 Seal material: foodgrade FKM
 Protection class: IP 65 (with connector and gasket)

TYPE: B398

Normally Closed

 AC 36 VA (inrush)
 DC 14 W

Notes

Protective treatment of operators is recommended, minimum batch may be required.

3/2 way direct acting solenoid valve, G 1/8"

Common features

Media¹: water, oil, air
 Media temperature: -10 to +130 °C
 Ambient temperature: -10 to +50 °C
 Body material: brass (CW719R EN 12165) low lead content
 Orifice material: stainless steel (1.4305 EN 10088/AISI 303)
 Operator material: stainless steel
 Seal material: foodgrade FKM
 Protection class: IP 65 (with connector and gasket)

Options

EPDM seal, temperature max. 120 °C (e.g. code RB397CEC)
 Electroless nickel plating treatment (e.g. code B397CVCK)

Notes

¹ Valve suitable for contact with food media as per the EEC Directives and Regulations.
 For more specific information, please contact Rotork Sales Department.

Media: water, oil, air and aggressive fluids
 Media temperature: -10 to +130 °C
 Ambient temperature: -10 to +50 °C
 Body material: AISI 316L (ASME SA351/351M GRADE CF3M)
 Operator material: stainless steel
 Operator seal and diaphragm material: FKM
 Silver shading ring as standard
 Protection class: IP 65 (with connector and gasket)

Options

EPDM seal, temperature max. 120 °C (e.g. code D204DEZI)
 NBR seal, temperature max. 90 °C (e.g. code D206DZYI)
 NPT connection on request, minimum batch may be required (e.g. code D204DVZIN)

TYPE: D204–D222

Normally Closed

TYPE: RD204–RD222

						77K1	230 V 50 Hz - 240 V 60 Hz

D634–636DTT1 - PTFE seal, NC -

Media¹: water, oil, liquids
 Media temperature: -10 to +130 °C
 Ambient temperature: -10 to +50 °C
 Coil power: AC 25 VA (holding)
 AC 50 VA (inrush)
 DC 22 W

Notes

¹ Not 100% leak-proof when used with air/gases.
 Approximate leak rate is 1,5 ml/min at max. OPD

ATTENTION: When high pressure valves are supplied without a coil, their nameplates display the max. OPD of the valve when equipped with an AC (25 VA) and DC (22 W) coil (as shown in the table above). **When using alternative coil power ratings please ensure to request separately the appropriate nameplate at time of order.**

Steam

Valve code	Nominal Ø [mm]	Flow rate Kvs [l/min]	OPD			Coils class 'H' only	
			min. [barg]	max. AC [barg]	max. DC [barg]	code	[Volts/Hz]

						7601	200 V 50 Hz - 220 V 60 Hz
						7701	230 V 50 Hz - 240 V 60 Hz

D634–636DTT - PTFE seal, NC -

Media: steam
 Media temperature: +80 °C² to +180 °C
 Ambient temperature: -10 to +70 °C
 Coil power: AC 18 VA (holding)
 AC 36 VA (inrush)
 DC 22 W

Notes

² For a correct functioning, the minimum working temperature of the solenoid valve cannot be below 80 °C

2/2 way pilot operated solenoid valve, G 3/8" – G 3/4"

Common features

Media: water¹, oil, air²
 Media temperature: -10 to +130 °C
 Ambient temperature: -10 to +50 °C
 Body material: brass (CW617N EN 12165)
 Orifice material: stainless steel (1.4305 EN 10088/AISI 303)
 Operator material: stainless steel
 Protection class: IP 65 (with connector and gasket)

Notes

- ¹ When using liquid fluids waterhammer and pressures higher than 20 barg can cause the diaphragm to tear
- ² Not 100% leak-proof when used with air/gases. Approximate leak rate is 1,5 ml/min at max. OPD

TYPE: D606/622

TYPE: RD606/622

D606/D622 - PTFE seal, NC -

Coil power: AC 18 VA (holding)
 AC 36 VA (inrush)
 DC 14 W

Notes
 Seamless tube as standard

RD606/RD622 - PTFE seal, NO -

Coil power: AC 18 VA (holding)
 AC 36 VA (inrush)
 DC 14 W

2/2 way latching solenoid valve (pilot operated), G 1/4" – G 1/2"

Common features

Media: water, oil, air
 Ambient temperature: -10 to +50 °C
 Body material: brass (CW617N EN 12165)
 Operator material: stainless steel tube, brass plunger
 Protection class: IP 65 (with connector and gasket)

Notes

Special operator with reduced stroke for low power coils

TYPE: LC203–LC205

Dimensions & weights		LC203	LC204	LC205

Coil power: AC 18 VA (holding)
 AC 36 VA (inrush)
 DC 14 W

Options

Electroless nickel plating treatment (e.g. code D211DSU \times)

Automatic drain valve systems with solenoid valves

Preassembled systems consisting of solenoid valve, timer and connector for time adjusted condensate discharge of tanks with compressed air, separators, mains drainage, dryers and filters.

Common features

Media: water, oil, air and inert gases
 Media temperature: -10 to +130 °C
 Ambient temperature: -10 to +50 °C
 Seal material: FKM
 Coil power: AC 18 VA (holding)
 AC 36 VA (inrush)
 DC 14 W

Protection class: IP 65 (with connector and gasket)
 Discharge time: 0.5 to 10 seconds
 Interval time: 30 seconds to 45 minutes
 Test switch: manual

Options

UL approved coils
 Valve with NPT connection upon request, minimum batch may be required (e.g. code D249DVFN)
 Available with analogue timer (see page 41)

Notes

For more detailed information about the various components (solenoid valve/timer/connector), please refer to individual datasheet

USERS BENEFITS:

- Adjustable to suit your system requirements
- Indoor / outdoor installations
- Reliable, long life
- Cost effective
- Visual indication of operation
- Manual override – test button

Analogue electronic timer

Ideal for: Automatic Drain Valves - Sampling Valves - Lubrication System - Air Dryers.

TYPE: AT2000

Features

- Supply voltage: UL 120 – 240V AC/DC - 50/60Hz (Code **AT2000C021**)
CE 24 – 240V AC/DC - 50/60Hz
- Absorption: 4 mA max.
- Operation temperature: -10° C to +50° C
- Protection class: IP 65 (according to EN60529) with connector and gasket
- Switch holding voltage: 400V max.
- Switch capacity: 1A
- Inrush current: 10A for 10 ms
- Duty cycle: 100% ED
- Switch life: $3 \cdot 10^8$
- Repeat accuracy: $\pm 1\%$
- Timing temperature coefficient: $\pm 0.005\% - C^\circ$
- Time ON: ■ from 0.5 to 10 seconds
- Time OFF: ■ from 30 seconds to 45 minutes
- Set/Reset/Test: membrane key
- Circuit: UL 94 V0
- Indicators: GREEN LED for 'power ON'
RED LED for 'valve open'
- Manual override: Test
- Colour: Black

Notes

In case of DC supply, polarity should be reversed: left fast-on positive (+), right fast-on negative (-). Please refer to product instructions for use
Timers are supplied in single boxes with two squared gaskets and M3x50 fixing screw (see assembling scheme)

Assembling scheme

Coils for M&M branded solenoid valves

M&M International coils are designed for continuous duty in conformity to the EN 60730 safety standards. They are encapsulated in a self-extinguishing synthetic material and offer high mechanical protection and excellent thermal dissipation. They are fully interchangeable on all M&M International solenoid valves, thereby reducing warehouse inventories.

Common features

Electrical connection: fast on connection 6,3x0,8
 Protection class: IP 65 (according to EN60529) - NEMA 4 (UL 50) with connector and gasket
 Operation: continuous (ED 100%)
 Voltage tolerance: AC +10% to -15%
 DC +10% to -5%

Notes

All coils manufactured under M&M brand comply with the RoHS Directive (2011/65/EU)
 Insulation class according to EN 60730-1 see the below table
 All windings are realised with class 'H' wires (180 °C)
 Custom voltages and low power consumption available: please contact Rotork Sales Department
Minimum batch quantity required for some voltage ratings

Series 7000 - Standard

Connection: to DIN EN 175301-803 form A (ex DIN 43650-A)

OPTIONS

Impregnated coils for humid environments (e.g. code D400)

Series 700R - UL approved

UL approved coils recognized component, file number E193928

Series 7001 - Class 'H'

OPTIONS

Impregnated coils for humid environments (e.g. code D701)

Series 7000 - High Power

OPTIONS

Impregnated coils for humid environments (e.g. code D7K1)

¹ Some valve configurations allow a max. fluid temperature up to 180 °C, please check valve datasheets.

DIN connectors for M&M branded solenoid valves

Coil connectors provide the safest flexible system for connecting M&M International solenoid valves and give a protection class of IP65. They are designed and made of synthetic material offering a high level of electrical insulation. Compliance with UL 1977 and VDE Regulations.

Common Features

Rated voltage (max.): 250 VAC / 300 VDC
 Nominal current: 10 A (Rated) / 16A (max.)
 Wire cross-section: 1.5 mm² (max.)
 Cable entry: PG9 (6 to 8 mm)
 Protection class: IP 65 (only with gasket)
 Insulation class: group C - VDE 0110
 Housing colour: black

Options

Connectors with protection circuits
 Connectors with LED
 Connectors with flying leads
 Other versions available upon request and depending on quantity:
 please contact Rotork Sales Department

Notes

Connectors are supplied with thermoplastic rubber bordered gasket, fixing screw and preinstalled position with ground H 12 (the connector can be spinned when connected)

Customised products

Rotork is constantly evolving and developing new products, enabling us to remain competitive in an ever changing market and keeping at the forefront of technological advances. For many years our team has operated in the most diverse industrial sectors and therefore acquired vast experience with a multitude of specialist applications. Our experience enables us to understand, design and manufacture to our customers' specific requirements.

We can develop new customised solenoid valve solutions according to the customers' technical requirements and needs, concentrating on increasing functionality, optimising space and reducing costs of existing systems.

Valve selection

Valve Selection

A solenoid valve should be chosen whenever the following conditions are met:

- ✓ Media without dirt particles
- ✓ Moderate flow volumes
- ✓ Average differential pressures
- ✓ High speed in operation
- ✓ Media with a viscosity not higher than 21 cST(3°E)

Valve Types

Direct acting solenoid valves 2/2 and 3/2 way NC or NO

When energised the coil electrically generates a magnetic force attracting the armature towards the fixed core. Inside the armature is a seal that acts upon the main orifice, either when the coil is de-energised (normally closed) or when the coil is energised (normally open). By revealing the orifice allows the fluid to pass. Average response time 5 – 25 ms.

Pilot operated solenoid valves 2/2 way NC or NO

This solenoid valve uses the force of the fluid to operate the valve via a suitable integral pilot valve. The inlet pressure must always be at least the same as the minimum ΔP figure shown on the datasheets. Using the same coils as direct acting valves much higher fluid volumes and pressures can be controlled with this solenoid valve. Average response time 50 – 500 ms.

Pilot operated solenoid valves with assisted lift 2/2 way NC

These solenoid valves are a combination of the pilot operated valves and the direct acting valves. The armature is mechanically connected to the diaphragm on which there is a pilot orifice. With minimal pressures the solenoid valve acts like a direct acting valve. Total opening as well as full flow do not occur at low pressures. With higher pressures it works as a pilot operated valve with full opening. Average response time 50 – 500 ms.

Function Types

2/2 way function indicates valves with inlet and outlet connections, whilst valves with 3/2 way functions have 3 connections and 2 flow passages. One orifice always remains open and one closed. Connections and flow direction are shown in the symbols on each technical datasheet (DIN-ISO 1219).

At rest valves can be either normally closed (NC) or normally open (NO):

- Normally closed (NC): the valve opens when the coil is energised.
- Normally open (NO): the valve closes when the coil is energised.

Optional Features

Manual Override (M)

Normally closed direct acting and pilot operated solenoid valves can be supplied with a manual override which allows the valve to be opened independently of electrical current.

Waterhammer Control (V)

Pilot operated solenoid valves (only versions specified in each datasheet) can be supplied with a system that regulates the closing speed of the diaphragm in order to control waterhammer.

The seal closing speed is operated by the adjusting screw: by screwing it clockwise (in the "+" direction) when using liquid, the valve will close slower reducing any waterhammer effect that may occur in the solenoid valve and the upstream pipes.

In the case of larger valves (1/4", 1/2" and 2"), please adjust the anti-waterhammer screw to ensure that that valve closes as slowly as possible in order to avoid causing any damage that may affect the functioning of the equipment and valve due to the waterhammer effect.

Technical information

The following points should be considered to ensure a correct choice of valve:

Connections and Nominal Diameters

Threaded connections are either "G"- inches (ISO 228) or metric. Nominal diameters (DN) are expressed in millimetres and correspond to the diameter of the valve's main orifice.

Performances (OPD)

Pressure values shown in this catalogue are the max values expressed in relative bar with no pressure at outlet.

For 3/2 way solenoid valves the pressure range can vary when used in other functions or systems.

The maximum pressure (PN) that the valve can tolerate is tested to 1.5 times the maximum value of the operating pressure differential (OPD).

Pressure (units of measurement)

The SI unit of pressure is the pascal (Pa), defined as 1 newton of force per square metre (1 N/m²).

As Pa is such a small unit, the kPa (1 kilonewton/m²) or MPa (1 Meganewton/m²) tend to be more appropriate to fluid engineering.

However, the most popular metric unit used to measure the pressure in fluid engineering field is the bar, which is equal to 105 N/m², and approximates to 1 atmosphere. This unit is used throughout this publication.

Other units often used include lb/in² (PSI), kg/cm², atm in H₂O (atmosphere) and mm Hg. Conversion factors are readily available from many sources.

Absolute pressure (bar a)

This is the pressure measured from the datum of a perfect vacuum: i.e. a perfect vacuum has a pressure of 0 bar a.

Gauge pressure (bar g)

This is the pressure measured from the datum of the atmospheric pressure. Although in reality the atmospheric pressure will depend upon the climate and the height above sea level, a generally accepted value of 1.013 bar a (1 atm) is often used. This is the average pressure exerted by the air of the earth's atmosphere at sea level.

Gauge pressure = Absolute pressure - Atmospheric pressure

Pressure above atmospheric will always yield a positive gauge pressure. Conversely a vacuum or negative pressure is the pressure below that of the atmosphere. A pressure of -1 bar g corresponds closely to a perfect vacuum.

Differential pressure

This is simply the difference between two pressures. When specifying a differential pressure, it is not necessary to use the suffixes 'g' or 'a' to denote either gauge pressure or absolute pressure respectively, as the pressure datum point becomes irrelevant. Therefore the difference between two pressures will have the same value whether these pressures are measured in gauge pressure or absolute pressure, as long as the two pressures are measured from the same datum.

Flow

The flow is the quantity of fluid that passes through the valve's main orifice which has the nominal diameter (DN) shown in the tables.

The flow is given with a constant Kv value (according to VDI/VDE 2173) that shows how many cubic meters of water, at a temperature of 20 °C, flow through the valve in one hour with a pressure difference of one bar across the valve.

To determine the flow at higher pressures, multiply the Kv value by the square root of the differential pressure. Flow values shown in the selection tables are subject to a tolerance of ± 15%.

Viscosity

Viscosity of a fluid (liquid or gas) is its resistance to flow freely in a duct.

This phenomenon is also called internal friction and depends on existing cohesion forces among the fluid molecules. The viscosity of liquids decreases as the temperature rises; the viscosity of gases grows if the volume does not change.

According to the International System of Units (SI), the physical quantities are: force **F** ⇒ in Newton **N**, distance **h** ⇒ in meters **m**, area **A** ⇒ in square meters **m²**, speed **u** ⇒ in meters per second **m/s**, the unit of measurement of the **dynamic viscosity** is Pascal per second (Pa•s) or Newton multiplied by second per square meter (N•s/m²).

Dividing the dynamic viscosity of the liquid by its density, you can obtain the **kinematic viscosity**. Its unit of measurement is expressed in square meter per second (m²/s). Since the given numerical values are too small, the most common used unit is 10.000 times smaller: the stokes (stox) **St**,

$$1 \text{ St} = 1 \cdot 10^{-4} \text{ m}^2/\text{s} \text{ or } 10.000 \text{ St} = 1 \text{ m}^2/\text{s}$$

as well as the additional unit centistokes **cSt**

$$1 \text{ cSt} = 1 \cdot 10^{-2} \text{ St}$$

Technical information

General Information on frequently used seal materials

Consideration of the media should be made when selecting seal and body types.

NBR should be used for air, water, neutral gases, diesel and in general it is resistant to oils and grease from -10 to +90 °C.

EPDM for hot water and steam. It is resistant to bases and acids in weak concentrations from -40 to +140 °C. EPDM seals should not be used for media containing oil.

FKM combines most of the characteristics of NBR and EPDM and is particularly suitable for hot water and hydrocarbons from -10 to +140 °C (not for steam).

PTFE is practically resistant to all media. It is rigid and is used from -20 to +180 °C.

SIGODUR (filled PTFE) and **RUBY** are stiff materials particularly suitable for heavy duty applications.

Kalrez® Spectrum™ 6375 is a compound specifically designed for the chemical process industry. This compound has excellent broad chemical resistance, good mechanical properties, and outstanding hot-air aging properties. Kalrez® 6375 is well suited for use in mixed process streams because of its excellent resistance to acids, bases and amines. It is also recommended for use in hot water, steam pure ethylene oxide and propylene oxide.

Coil power supply

It is important that the exact voltage and frequency of the coil is used for the valve to operate correctly. Provided the coil is fitted correctly on the operator and that the armature is not obstructed, the valve can be operated for an indefinite time within the temperature limitations indicated. All solenoid valves have a copper shading ring to reduce vibrations caused by alternating currents. **Remark: The same valve fitted with coils of different power may have different pressure ratings than standard combinations indicated in each datasheet in this catalogue. (e.g. UL coils or high power coils).**

Media and ambient temperatures

Temperature limits for the media in the datasheets and should be used as a guide to valve selection. Normally the maximum ambient temperature can reach +50 °C for solenoid valves with coils in class "F", +70 °C for class "H". For applications outside these limits please contact our Technical Department.

General purpose solenoid valves

Solenoid valves shown in this catalogue, either normally open or normally closed, are intended to control the flow of fluids and cannot be used as safety valves.

Valve installation

To ensure proper valve function please observe following instructions:

Water hammer or fluid hammer

Water hammer (or, more generally, fluid hammer) is a pressure surge or wave resulting when a fluid (usually a liquid but sometimes also a gas) in motion is forced to stop or change direction suddenly (momentum change).

Water hammer commonly occurs when a valve is closed suddenly at an end of a pipeline system, and a pressure wave propagates in the pipe. It may also be known as hydraulic shock.

When using liquid fluids water-hammer can occur at pressure of 6 relative bar or higher.

This pressure wave can cause major problems, from noise and vibration to pipe collapse. It is possible to reduce the effects of the water hammer pulses with accumulators and other features.

Mitigating measures:

– **Air vessels** typically have an air cushion above the fluid level, which may be regulated or separated by a bladder. Sizes of air vessels may be up to hundreds of cubic meters on large pipelines. They come in many shapes, sizes and configurations. Such vessels often are called accumulators or expansion tanks.

– **Water Hammer Arrestors** are hydropneumatic devices similar to shock absorbers that can be installed between the water pipe and the machine to absorb the shock and stop the banging.

Safety

This product is not a safety device and must not be used as sole device to prevent the over-pressure of some parts of the plant or the containment of dangerous fluids.

Always connect the coil's earth terminal to ground to ensure the safety of the user and installation. The coil provides the basic insulation only. Install the product in a protected place to prevent electric shocks.

The coil should not be energized if it is not fitted onto a valve or without a plunger inside the valve, as it would overheat and get damaged. Do not touch the energized coil: risk of high temperature.

Do not use the tubes for conveying fluid to ground electrical devices.

Before disconnecting or disassembling the valve, make sure that there is no pressure inside the tubing or the valve itself. Accidental shocks due to fall or collision may damage the operator and/or the integrity of the coil encapsulation thus causing malfunctions such as loss of insulation, seizure of the moving parts and overheating.

Installation

Check for the operating conditions on product label and on the technical documents.

Check for compatibility between medium and valve materials. In case of doubt, please contact the manufacturer.

Keep the valve operator in a vertical position, facing upwards. This prevents limescale or dirt particles in the operator tube which could restrict the armature or create excessive noise whilst operating.

Whilst tightening or unscrewing the valve must be held or revolved only and exclusively by the hexagon or the frame set (in order to avoid damage to its components such as coil, armature tube, etc.).

The recommended **tightening torque of the coil nut is 0,5 Nm maximum**, a higher torque may cause damage to the valve armature tube.

The recommended **tightening torque of the connector screw is 0,5 Nm maximum**, a higher torque may cause an excessive yield stress with consequent damages to the coil rivet and/or plastic encapsulation.

Connections

To ensure that the solenoid valve works properly, do not connect to pipework with an internal diameter less than the nominal diameter (DN) of the valve. Clean all pipework before connection to the solenoid valve: care should be taken to prevent foreign bodies – dirt or material chips – from entering the valve during the assembly phase.

Use suitable seal material on the valve threads. Where liquid sealants are used, it is important to prevent them from entering the valve and block the movement.

Flow Direction

Respect the direction of flow across the valve, shown with an arrow or by numbers on the valve body, depending on the model type.

Filtration

If the fluid contains dirt particles it is necessary to install a filter upstream of the solenoid valve. Dirt is the most frequent cause of malfunction.

Environment

Coils fitted with suitable connectors have a protection class of IP65. However, it is advisable not to use the solenoid valve outside or in very damp conditions without adequate protection. Provide sufficient ventilation for the solenoid valve. **During continuous service the coil of the solenoid valve becomes hot and should not be touched.**

Quality standards

Rotork has a management system certified to ISO 9001, ISO 14001 & OHSAS 18001.

DNV is an independent classification society. Since 1998 it has certified the compliance of Rotork Italy's quality management system (formerly M&M International srl), and recently also the compliance to the ambient and safety standards, emphasizing the effort to implement continuous improvement processes aimed at developing the business in a logic of customer satisfaction, sustainability and safety for all its employees.

Certifications and approvals

The UL Listing mark on a product signifies that the product meets UL's Standards for Safety. The UL Listing mark appears on products and components suitable for factory and field installation.

All of the products carrying a UL Listing mark are covered by UL's Follow-up services program to verify that the products continue to be manufactured in compliance with UL's Safety Requirements.

Rotork manufactures and resells valve coils and timers complying with UL 429 and 746C under M&M International brand.

The cURus Listing mark on the products indicates that the compliance is accepted both in USA and Canada.

RoHS

The Restriction of Hazardous Substances Directive (RoHS) 2011/65/EU regards the restriction of the use of Lead (Pb), Cadmium (Cd), Mercury (Hg), Hexavalent chromium (Cr6+), Polybrominated biphenyls (PBB) and Polybrominated diphenyl ether (PBDE) in electrical and electronic equipment sold in the European Union.

RoHS is meant to prevent the release of these substances into the environment and protect the human, animal and environmental health, especially during the waste treatment.

The CE mark on a product guarantees the compliance with the RoHS Directive. Since 2006 the coils manufactured under M&M brand comply with the RoHS directive with the letter 'R' before the batch number.

Miscellaneous

Upon request (to be specified at the time of the Purchase Order) Rotork can provide the following inspection documents, which are also related to requirements of the PED Directive 2014/68/EC as additional evidence of the technical requirements of supplies:

For metal parts in stainless steel AISI 316L or 304L the inspection certificate 3.1 according to the standard EN 10204 (this certificate is mandatory only for products in categories above I, see PED 2014/68/EC ANNEX I, art. 4.3).

For all products the Test Report 2.2 according to the standard EN 10204, is relevant for products in category I or SEP.

CE marking

The CE marking was introduced in 1993 upon establishment of the European Economic Area. It regulates the entire life cycle of a product: design, manufacturing, placing on the market, disposal and enables its free movement within the European market (EEA).

CE marking signifies that the product conforms with the essential applicable EC requirements, such as safety, public health, consumer protection, and gives the product the presumption of conformity.

By affixing the CE mark on a product, manufacturers and importers are declaring, at their sole responsibility, conformity with all of the legal requirements of the Directive.

EC directives

EC directives for product safety were issued to unify regulations and working practices in force in the countries of the community prior to the constitution of the European Union. The following three directives concern electrical appliances and machines in general:

Machinery directive

EMC Directive

Low Voltage Directive (2006/95/EC)

The directive 97/23/EC concerns safety of pressure bearing equipment.

The directive 2011/65/EU (RoHS) limits the use of dangerous substances in electrical and electronic equipment.

Ask Rotork Sales Department for your Declaration of compliance to EC Regulation no. 1907/2006.

M&M branded products conforming to the EC directives

Products subject to the Low Voltage Directive are given a certification by the European Community.

Rotork issues declarations of conformity for M&M branded products.

We believe that our products are components and as such do not form a part of the range of products subject to the EMC directive. However, conformity of M&M branded products to the EMC directive could change depending on the function of the product's use, of the configuration (for example the use of connectors with passive electronic components, LED etc.), or the conditions of the electrical connection. For this reason it is recommended that you check the compliance of the final product with the EMC Directive.

Coding chart

Example code

_ - _ - B - 2 - 97 - D - V - E - K - 2700 - OB1

Electrical Supply

. = AC
C = DC

Function

. = Normally closed
D = Diverting
G = Universal
L = Latching
R = Normally open
S = 2nd service

Serial Letter

B = Armature ø10 mm
C = Armature ø10 mm low power
D = Armature ø14.5 mm
E = Armature ø14.5 mm low power

Ways / Type of Valve

2 = 2/2 ways
3 = 3/2 ways
6 = For steam
8 = Various
9 = Manifold

ID Code

Valve body identification

Fixed Core Type

A = 3/2 way 1/8" gas, spherical
C = 3/2 way 1/8" gas for bicone
D = 2/2 way 1/8" gas
E = 3/2 way gasket holder

Seal Material

B = NBR	R = RUBY
E = EPDM	S = Silicone
K = Kalrez®	T = PTFE
L = Sigodur (fixed PTFE)	V = FKM

ø Orifice (mm)

A = 1.0	O = 5.5
B = 1.2	P = 6.0
C = 1.4 - 1.5 - 1.6	T = 10.0
D = 1.7 - 1.8	U = 10.5 - 11.0
E = 2.0	V = 11.5
F = 2.2 - 2.3	Z = 13.0
G = 2.5	W = 14.5 - 15.0 - 15.5 - 16.5
H = 3.0 - 3.2	X = 18.0 - 20.0
L = 4.0	Y = 24.0 - 25.0
M = 4.5	K = 40.0
N = 5.0	J = 50.0

Special Executions

A = Silver shading ring
F = Protective treatment
K = Electroless nickel plating treatment
M = Manual override
N = NPT thread
V = Speed control screw

Coil Code

Type of Connector

0A1 = With connector 600 011 00 - Not assembled on the coil
0B1 = With connector 600 001 00 - Not assembled on the coil
